Valencia, Spain · Open to AI development roles, freelance and remote work.

PROFILE

AI developer with a 15-year background in digital design and motion. Since May 2026 I have shipped 11 projects with Claude Code as my development team: personal AI agents, live web apps, a 3D web experience and a desktop game.

I set the product, the architecture and the rules the agents work by (project memory, approved specs, tests they can run, a security pass before publishing) and I review every change before it ships. My first code was ActionScript 3.0 at ModOp, followed by UI design and frontend development at MVP Lean.

PROJECTS

Abril · Personal AI assistant — JUN - SEP 2026

Python, Claude Agent SDK, MCP, PostgreSQL + pgvector, Docker

- Built a personal assistant I use every day on Discord: calendar, mail, tasks, expenses, reminders and long-term memory with pgvector.
- v1 was an orchestrator with four Claude sub-agents on a Raspberry Pi (72 commits in 7 days). After a code audit, v2 merged them into one agent with an encrypted local vault, a sandboxed MCP client, prompt caching and 80 regression tests.
- v3 runs on the Claude Agent SDK with a Claude subscription, its tools served as an in-process MCP server and tool loops capped at 8 steps.

Té Para Dos · Desktop card game — SEP - OCT 2026

Godot 4.7, GDScript, GLSL, Python tooling

- Designed and shipped a 3D family card game with a rule-based opponent, a 9-step tutorial and three languages. v1.0 is on itch.io (29 commits in 6 days).
- Kept the rules engine apart from the graphics so a headless script could play more than 300 games and catch rule bugs.
- Replaced card art whose licence blocked sales with AI-generated faces and code-drawn cards, so every asset can be sold.

FWC2026 Live · Live web app — JUN 2026

Astro, React, TypeScript, Python, Cloudflare, Web Push

- Built a bilingual World Cup 2026 app that recalculated the 12 groups, the best third-placed teams and the round of 32 on every live goal, following FIFA tiebreak rules.
- Ran a Python feed on a Raspberry Pi behind a Cloudflare Tunnel, with API keys that never left the device, plus push notifications and an installable PWA. 25 commits in 4 days, used throughout the tournament.

Laboratorio de Estudio · 3D web app — SEP 2026

Three.js, GLSL, Web Audio API, Vite, GitHub Actions

- Gamified study diary inside a procedural 3D vault: GPU wave simulation, raymarched volumetric fog and spatial audio synthesized live.
- 117 logic checks run in GitHub Actions before each deploy to GitHub Pages.

Annie · Job-search agent (experiment) — MAY 2026

Python, Claude API, GitHub Actions, Gmail API, Google Sheets

- Built to experiment with agents and automated web interaction: an agent with her own inbox that read more than 11 job sources every morning, scored offers with Claude Haiku in structured JSON and sent a tailored CV and cover letter for each one.
- Answered replies every 15 minutes, logged everything in Google Sheets and emailed a suggested code change when asked for something she couldn't do. 40 commits in a week.

luitiescobar.com · Portfolio site and CMS — OCT 2026

Astro, Sanity, Cloudflare Workers, D1, Figma

- Rebuilt my design portfolio as a bilingual Astro site with a Sanity CMS, privacy-preserving likes on Cloudflare D1 and analytics that load only after consent. 35 older projects imported by script. Live since 17 October 2026.

MORE PROJECTS

Diario de Estudio · Spec-driven development workflow for Claude Code: constitution, 9 slash commands, MCP checks — 2026

Esco Playground · Desktop app with local AI personas on Ollama, shared chat and per-agent memory — 2026

xfutve · Editorial assistant that drafts sports posts with Claude and waits for approval on Telegram — 2026

Gmail Cleaner · Local inbox cleanup and data-breach check with Gmail API and Claude — 2026

Who's The Jefe · Agency simulation game where Claude writes the employees' emails and conversations — 2026

EARLIER DEVELOPMENT

UI Designer & Frontend Developer · MVP Lean — OCT 2017 - APR 2019

Panama · Remote

- Built features for a data warehouse application for an e-commerce venture capital firm.
- Built an online video course platform from scratch, and designed the company identity and the Fromzero Academy website.

Flash Developer & Flash Motion Designer · ModOp — NOV 2011 - OCT 2014

Panama · On-site

- Interactive web experiences and mini-games in ActionScript 3.0 for Marvel, Xbox, Disney, Hallmark and PlayStation.

SKILLS

Agents	Claude API, Claude Agent SDK, Claude Code, MCP servers and clients, tool use, prompt caching, pgvector memory, Ollama
Languages	Python, TypeScript, JavaScript, GDScript, GLSL, SQL, ActionScript 3.0
Frameworks	Astro, React, Three.js, Phaser, Godot, FastAPI, Electron
Infrastructure	Cloudflare (Workers, Pages, D1, Tunnel), GitHub Actions, Docker, PostgreSQL, SQLite, Raspberry Pi
Workflow	Agent instructions and project memory, spec-driven development, headless tests and simulations, security reviews
Design	Figma, Photoshop, Illustrator, After Effects, Blender, UI and UX, motion design, art direction

TRAINING

Desarrollo con IA: El nuevo programador	BIG school · Brais Moure (3-day course)
EF SET English Certificate	74/100 · C2 Proficient (2021)
ActionScript 3.0 training	MVC and OOP principles

LANGUAGES

Spanish Native — English C2 Proficient

PORTFOLIO
